Exadel Announces New Chief Technical Officer and Vice President of Delivery to Support Growing Practices and Solutions Portfolio

Igor Landes and Mikhail Andrushkevich bring decades of industry experience to Exadel

WALNUT CREEK, Calif., Aug. 8, 2019 — Exadel (www.exadel.com), a global leader in digital software engineering solutions, today announced Igor Landes as Chief Technology Officer (CTO) and Mikhail Andrushkevich as Vice President of Delivery. Both bring deep expertise to their respective positions, further enhancing the excellence of Exadel's software delivery capabilities for a growing roster of global customers.

Before his new role, Landes served as Chief Delivery Officer and Vice President of Engineering at Exadel. As CTO, Landes' primary focus will be to provide support to the sales team, along with promoting technical excellence across all parts of the organization. In addition, he will be responsible for:

- Identifying technology trends and aligning applications with Exadel Business objectives

- Defining and implementing the technology innovation strategy, including support for the Innovation Lab

- Supporting solutions marketing and verticalization

With more than 25 years of extensive experience in the software industry, Landes has the right expertise to fulfill the role of CTO.

"I am excited to get started in my new role as CTO," said Landes. "Combining my background in leading globally distributed software development projects along with this increased responsibility gives me the opportunity to pursue my passion for providing software solutions to our customers."

"We are very excited to have Igor in the CTO office at Exadel," said Fima Katz, founder and CEO at Exadel. "He has a proven track record of delivering complex projects in a high-pressure environment and an extensive background in leading globally distributed software development projects."

Andrushkevich has been at Exadel for more than 13 years and has held positions such as Program Manager, Senior Delivery Manager, Department Manager, Scrum Master and Project Manager before his appointment to Vice President of Delivery. In this new role, Andrushkevich is responsible for the delivery of Exadel solutions for clients, improving the quality of these solutions, enhancing the software development processes, and developing new leaders within Exadel. He also provides senior leadership and supervision for all delivery management staff at Exadel. Andrushkevich has more than 18 years of professional experience working on large products as well as in services.

"Software delivery is at the core of what Exadel provides," said Andrushkevich. "As VP of Delivery, I am eager to help ensure all products and projects delivered to customers are of the highest quality. We strive for excellence in all we do at Exadel and I look forward to being a steward of this promise."

"Mikhail has proved himself as a successful leader of multiple international teams," said Katz. "The company has established itself as a leader in agile software delivery, but the expertise he brings in

project and product management, using Agile approaches, and creating successful teams, was the missing link we needed to connect our customers and our solutions effectively."

With the promotion of these two individuals, Exadel is looking forward to helping enterprises build complex software products and projects, stay ahead of the innovation curve and ensure that digital transformations are successful and agile.
